A laptop screen is shown in a dark, dimly lit environment. The screen displays a line graph with a blue line showing an upward trend, and a globe is visible in the background. The text is overlaid on the screen in a white, sans-serif font.

Developers Using AI Right Will Outperform Entire Teams

Give your team a competitive edge with the workflow that's changing how modern software gets built.

Traditional Coding Slows You Down

- Most developers still write code like it's 2015—manual, repetitive, and slow.
- Meanwhile, AI tools like ChatGPT, Copilot, and Windsurf can now generate, refactor, and document code in seconds.
- But without proper training, teams use AI in chaotic, unscalable ways—or ignore it entirely.
- **CodeShift** fixes that with a systemized workflow built on real tools, real output, and real results.

Not Just Prompting – A Workflow

Vibe Coding is a modern development approach where AI tools become true co-pilots—not just flashy add-ons.

We teach developers how to integrate AI into every step of the process: writing code, generating documentation, creating tests, and refactoring at scale.

The result? Speed without chaos. Quality without compromise.

With **Code Shift**, your team can generate complete features—or even entire applications—faster than ever, while maintaining full control and clarity.

Built by a Developer. For Developers

Proven expertise. Real results. No buzzwords

Tom is a Frontend Engineer with over 15 years of experience building and scaling apps used by millions—from billion-dollar companies to cutting-edge startups. He led frontend development for platforms serving 18M users, rebuilt core systems for government and fintech orgs, and contributed to a rebrand used by 10 million merchants.

He's the author of *Vibe Coding Bible* and *AI for Founders* helping teams rethink how software is built with AI.

Tom's training brings deep technical skill, clean code thinking, and hands-on AI workflows—all grounded in real-world experience and business impact.

Fast Ramp-Up. Lasting Impact

A 4-week program tailored to your team.

Outcomes You Can Measure

Real business and team-level value

- Teams using vibe coding report 40–60% faster delivery
- Senior devs stay focused on architecture, not boilerplate
- Onboarding is faster. Burnout is lower
- Codebases improve in structure, clarity, and maintainability
- It's not theory – we build real features during the training

Choose the Right Fit

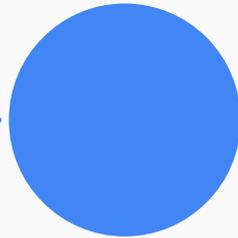

Pilot Workshop

Test vibe coding with a single team – remote or onsite

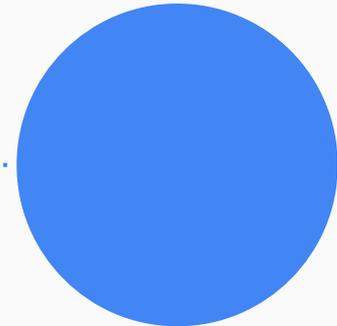

Team Training

Live, guided sessions for up to 12 devs

Company-Wide Enablement

Create internal champions and systemize AI usage across teams

Book a free discovery call

Let's talk about your team, goals, and how to get started

Built on What Works

Every training is anchored in these core principles:

```
graph TD; A[Simple, structured workflows] --- B[Code fast without breaking things]; B --- C[Maintainability, security, and standards];
```

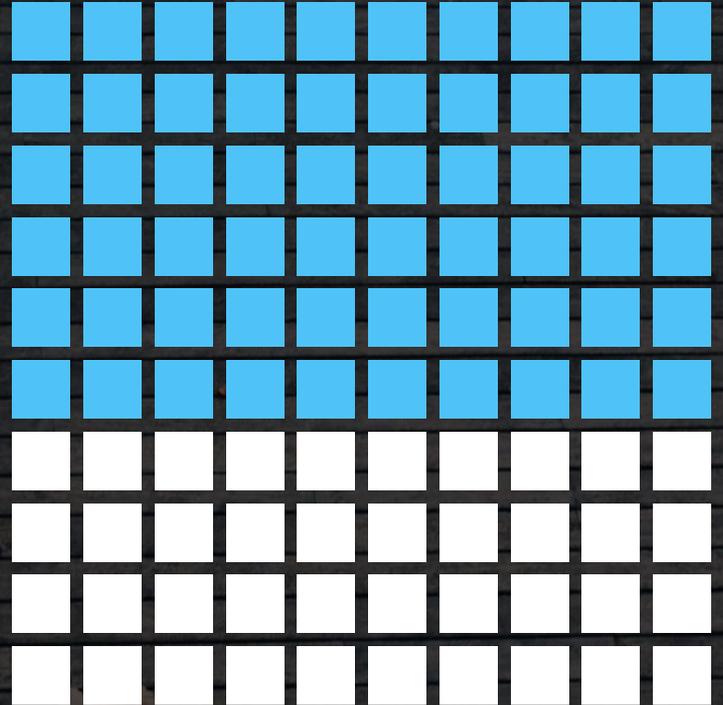

Simple, structured workflows

Code fast without breaking things

Maintainability, security, and standards

Where Will Your Team Be in 3 Months?

AI won't replace your devs. But teams using it right will outperform those who don't.
